

AM9035A

18 GHz to 44 GHz Frequency Extender

AM9035A is a downconverter module that provides frequency coverage from 18 GHz to 44 GHz. This connectorized module is designed for high performance and low size, weight, and power (low SWaP) and is intended to complement existing RF receivers, or ultrawideband direct digitizers. The analog IF output frequency is centered at 4 GHz with a 2 GHz instantaneous bandwidth.

This module includes sub-octave preselector filters, pre-amplifiers, a local oscillator, frequency converters, variable attenuators, power and control line filtering, and a control FPGA. Interfacing to the tuner is accomplished by simply providing a DC voltage, external 100 MHz frequency reference, and SPI control.
